

yucebaş FOOD CO.

INNOVATIVE DRIED FRUITS

Enriching the values of our lands

We are a family company, working to enrich the values, like figs, apricots, raisins... that our lands offered us.

We took our first steps to the dried fruit sector, by producing machinery, that would process and add value to these products, in the right way.

On behalf of high quality, by saving our experiences, by developing our production phases and by always innovating our business against time;

We created a value in the dried fruit sector with the name "Yücebaş Food Co.", today.

We produced

We produced diced and sliced (julienne) cutting machinery for dried fruit producers. Fruits like dried figs and dried apricots were cut on conveyor belt, in these first-generation machines.

We renovated

We renovated our dried fruit pasting machine, which we designed in 1985. This renovated version was the base, for the pasting machine we use today.

According to usage area or customer demand, we could crush the seeds of dried figs in the pasting process and arrange the consistency of the paste, like soft or hard, with our renovated pasting machine.

1964

1990

1993

1995

1998

We started

We started dried fruit sector in 1964, by producing food machinery. Stem sorting machine for raisins, dried fig and dried apricot washing machines, grinders for cereal processing, are amongst our machinery products, for domestic market demands.

We designed

We designed Turkey's first dried fruit pasting machine. Dried fruits were pasted by manual mincing machines, before our design. More than 10.000 ton product could be pasted, after our pasting machine.

We made a revolution

We made a revolution with the new version of dried fruit cutting machine we produced in 1998. This machine, which decreased the contamination and wastage rate of dried fruit, in cutting process, was a milestone for the industry.

We also started contract manufacturing, by processing diced product of 55 dried fruit company, with our new machine.

We established

Our family's second generation stepped in dried fruit sector, at the same time we started contract manufacturing, with our new cutting machine.

By the year of 2010, we became a complete food premises, by establishing our production facility in İTOB (Izmir Chamber of Commerce Organized Industrial Zone).

We built

We built our own pasting line, after establishing our production facility.

We started to produce high quality dried fruit paste, with our latest version of our pasting machine, by sorting out hard substances, like stem or little stones, in dried fruits.

We exported

We started to export our products, in 2014, after gaining the full control of our production phases, for obtaining the highest quality.

Today, we are supplying for the producers, who are looking for qualified and innovative production, from many parts of the world.

2010

2011

2012

2013

2014

2020

We grew

Rice flour is the most important input product of dried fruit cutting process. In the beginning years of our production, we were supplying rice flour from producers.

But in 2011, we started our own rice flour production, for gaining full control on parameters, like pathogen and microbial rate, of the product.

We developed

We started to develop our facility, for high quality production.

During this development period, by building new storage areas, quality control systems and laboratory to our production facility, we started to become a brand, too.

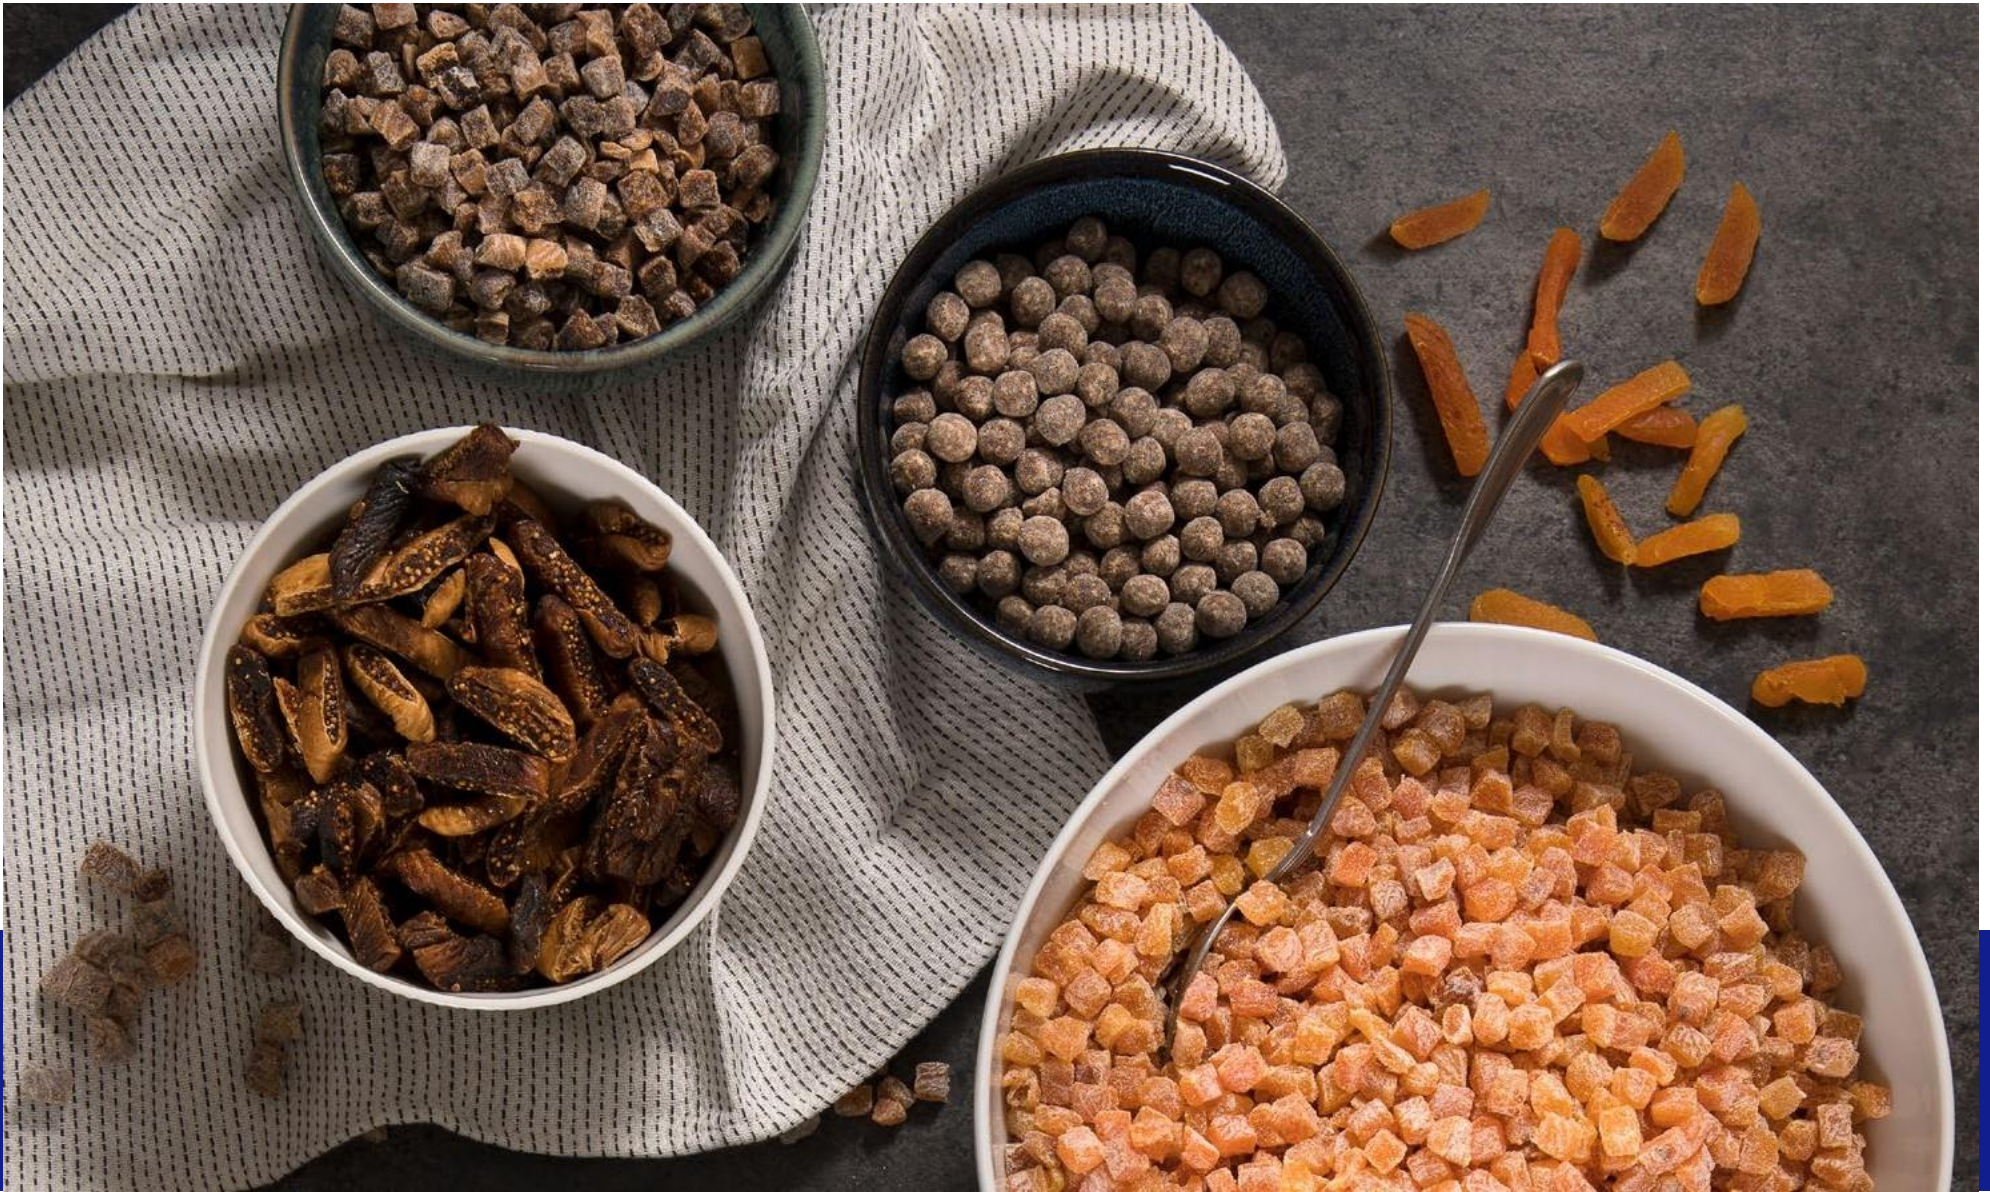

We proceed...

We are developing and growing more, by the time passing and we are proceeding to enrich the values, offered by our lands.

If you are producing for the same goals, let's grow together...

Our History

Diced Process

**Cut Dried Fruits with
Different Size and
Consistency, According
to Usage Area**

Origin: TURKEY

Diced cut dried figs are used in breakfast cereals, muesli mixtures, chocolate, bakery, fruit yogurt and pastry products. Dimensions can be arranged as according to area of usage and demand.

- Grown with organic agricultural methods and contains 99% dried fig and 1% gluten-free rice flour
- The moisture rate can be reduced to 10%, by extra drying with special ovens, for a cruchy taste.
- All products go through metal and x-ray examination and sortex.

 Palletization	 Size Chart	 Shelf Life	 Package
80x120 Euro Pallet Bulk Load Plastic Pallet	4x4 mm 5x5 mm 8x8 mm 10x10 mm 12x12 mm	Under Cool and Dry Conditions One Year	5 - 10 Kg and Vacuum Pack
Annual Capacity	3200 Ton a Year	MOQ	2000 Kg
